

# **BERHAMPUR UNIVERSITY**

## *Syllabus*

for

### **Master of Computer Applications (2-Year Programme)**

**Department of Computer Science  
Berhampur University  
Berhampur-760007 (Orissa)**

**2020**

**BERHAMPUR UNIVERSITY**  
**Syllabus for Master of Computer Applications**  
 (Applicable for Students Taking Admission from the Session 2020-21)

**Objective of the Course**

The objective of the MCA curriculum is to equip the students with the ability to analyse varieties of real-life problems and develop computer based solutions for effectiveness and efficiency. Keeping in view the requirements of the evolving software industry and also to provide a foundation for higher studies in Computer Science, effort has been made in the choice of subjects to balance between theory and practical aspects of Computer Science. On successful completion of this course a student can find a career in software industries, corporate sectors, or Government Organizations as a technical professional or pursue research in the core areas of Computer Science and Applications.

**First Semester**

| Sl. No. | Subject Code | Subject Title                                | Internal | External | Credits |
|---------|--------------|--|----------|----------|---------|
| 1.      | COMP C101    | Mathematical Foundations of Computer Science | 20       | 80       | 4       |
| 2.      | COMP C102    | Data Structures with C Programming           | 20       | 80       | 4       |
| 3.      | COMP C103    | Computer Architecture                        | 20       | 80       | 4       |
| 4.      | COMP C104    | Operating Systems                            | 20       | 80       | 4       |
| 5.      | COMP C105    | Management Information Systems               | 20       | 80       | 4       |
| 6.      | COMP C106P   | Lab - 1 (DS & C Programming)                 | 100      |          | 4       |

**Second Semester**

|     |            |  |     |    |   |
|-----|------------|--|-----|----|---|
| 7.  | COMP C201  | Data Base Management Systems           | 20  | 80 | 4 |
| 8.  | COMP C202  | Computer Based Optimization Techniques | 20  | 80 | 4 |
| 9.  | COMP C203  | Design and Analysis of Algorithms      | 20  | 80 | 4 |
| 10. | COMP C204  | Computer Network                       | 20  | 80 | 4 |
| 11. | COMP C205  | Software Engineering                   | 20  | 80 | 4 |
| 12. | COMP C206P | Lab - 2 (Data Base Management)         | 100 |    | 4 |

**Third Semester**

|     |           |  |    |    |   |
|-----|-----------|--|----|----|---|
| 13. | COMP C301 | Object Oriented Programming and Design with Java | 20 | 80 | 4 |
| 14. | COMP C302 | E-Commerce                                       | 20 | 80 | 4 |
| 15. | COMP C303 | Data Warehousing and Data                        | 20 | 80 | 4 |

|                        |            |                                     |             |    |           |
|------------------------|------------|-------------------------------------|-------------|----|-----------|
|                        |            | Mining                              |             |    |           |
| 16.                    | COMP C304  | Artificial Intelligence             | 20          | 80 | 4         |
|                        |            | <b>Elective Course – I</b>          |             |    |           |
| 17.                    | COMP E311  | Soft Computing                      | 20          | 80 | 4         |
| 18.                    | COMP E312  | Internet of Things                  |             |    |           |
| 19.                    | COMP E313  | Computer Graphics                   |             |    |           |
| 20.                    | COMP E314  | Mobile Computing                    |             |    |           |
| 21.                    | COMP C305P | Lab – 3 (Java Programming)          | 100         |    | 4         |
| <b>Fourth Semester</b> |            |                                     |             |    |           |
|                        |            | <b>Elective Course - II</b>         |             |    |           |
| 22.                    | COMP E411  | Information Security                | 20          | 80 | 4         |
| 23.                    | COMP E412  | Big Data Analytics                  |             |    |           |
| 24.                    | COMP E413  | Compiler Design                     |             |    |           |
| 25.                    | COMP E414  | Data Science and Python Programming |             |    |           |
| 26.                    | COMP E415  | Machine Learning                    |             |    |           |
|                        |            | <b>Elective Course - III</b>        |             |    |           |
| 27.                    | COMP E416  | Block Chain Technology              | 20          | 80 | 4         |
| 28.                    | COMP E417  | Image Processing                    |             |    |           |
| 29.                    | COMP E418  | Cloud Computing                     |             |    |           |
| 30.                    | COMP E419  | Service Oriented Computing          |             |    |           |
| 31.                    | COMP E420  | Web Design and Development          |             |    |           |
| 32.                    | COMP PRO   | Major Project Work / Internship     | 400         |    | 16        |
| <b>Total</b>           |            |                                     | <b>2400</b> |    | <b>96</b> |

**Note: A student can opt for only one course from among the courses mentioned under the respective elective groups.**

## First Semester

|  |   |                    |
|--|---|--------------------|
| <b>Sub. Code:</b> COMP<br>C101   | <b>Mathematical Foundations of Computer Science</b> |                    |
| <b>Semester: 1</b>   | <b>Credit: 4</b>                                    | <b>Core Course</b> |
| <b>Pre-requisites:</b> Basic mathematical concepts   |   |                    |
| <b>Objective:</b><br>✓ To learn the concepts of set theory, algebraic system, and graph theory |   |                    |

### Unit – I 10 hours

Statements and Notations, connectives, statement, formula and truth tables, normal forms, theory of inference for statement calculus, predicate calculus, inference theory of predicate calculus.

### Unit – II 10 hours

Functions, recursion, algebraic systems with one binary operations, monoids, semi groups, groups, subgroups, homomorphism, Lagrange's theorem, Normal subgroups, residue arithmetic, application of residue arithmetic to security, Group codes.

### Unit – III 10 hours

Algebraic systems with two binary operations, Lattice as partial order sets, Boolean, Functions, Finite State Machines.

### Unit – IV 10 hours

Basic concepts of Graph Theory, Directed and Undirected Graph, matrix representation of graph, storage representation and manipulation of graph, shortest path and APSP problem, trees and their representation and operations, List and graphs.

### Text Books:

1. Discrete mathematical structures with application to computer science, J. P. Tremblay and R. Manohar (Mc Graw Hill International)
2. Elements of Discrete Mathematics- C. L. Liu (Mc Graw Hill)
3. Modern Applied Algebra- G. Birkhoff and T.C. Bartee (Mc Graw Hill)
4. Discrete Mathematics – S K Chakraborty & B K Sarkar, Oxford University Press.

|  |   |                    |
|--|---|--------------------|
| <b>Sub. Code:</b> COMP<br>C102   | <b>Data Structures with C Programming</b> |                    |
| <b>Semester: 1</b>   | <b>Credit: 4</b>                          | <b>Core Course</b> |
| <b>Pre-requisites:</b> Algorithm, Basic programming skill  |   |                    |
| <b>Objectives:</b>   |   |                    |
| <ul style="list-style-type: none"> <li>✓ To understand various logical organization of data in computers memory</li> <li>✓ To develop algorithms for performing different operations on data structures and implement in C language</li> </ul> |   |                    |

**Unit – I**

10 hours

Review of C programming, Control structures: conditional and looping statements, Arrays. Multi-dimensional arrays, Structures, Functions, Recursive functions, use of pointers, Dynamic memory allocation using malloc( ) and calloc( )

**Unit – II**

10 hours

Linear data structures and their sequential storage representation, Stack, Queues, Circular Queues and Deques, Operations on these data structures, Applications of Stack and Queue, Priority Queue.

Linear data structures and their linked representation: Singly linked, Circularly linked and doubly linked lists, insertion and deletion operations on these data structures, Representation of sparse matrix using linked list.

**Unit – III**

10 hours

Non-linear data structures: Binary tree representation, Tree traversal: Inorder, Preorder, Postorder (recursive and non-recursive algorithms), Conversion of general tree to Binary tree, Binary search tree, Representations of graph: adjacency matrix, adjacency list, multi list, Graph traversal: Depth first and Breadth first.

**Unit – IV**

10 hours

Performance analysis of Searching techniques such as Sequential and Binary search.

Performance analysis of Sorting techniques such as Insertion, Selection, Bubble, Quick, Radix, Merge, and Heap sort.

Representation of B-tree and AVL tree, creation, insertion and deletion operations on these trees.

**Text Books:**

1. An Introduction to data structures with applications, J. P. Tremblay and P. G. Sorenson, McGraw Hill.
2. Fundamentals of Data Structures in C - Horowitz, Sahni, Anderson-Freed, Universities Press
3. Data Structures using C - Reema Thareja, Oxford University Press.
4. Data Structure and Algorithms - G. A. V. Pai, McGraw Hills Education India

|                                      |   |                    |
|--------------------------------------|---|--------------------|
| <b>Sub. Code: COMP C103</b>          | <b>Computer Architecture</b>  |                    |

| <b>Pre-requisites:</b> Digital Logic |   |                    |
| <b>Objectives:</b>                   |   |                    |
| ✓                                    | To study design of an elementary basic computer                                       |                    |
| ✓                                    | To have a better understanding of a hardwired and microprogrammed control unit.       |                    |
| ✓                                    | To introduce the concept of memory hierarchy and pipelining to speed-up the processor |                    |

**Unit – I**

10 hours

***Register Transfer and Micro-operations:***

Register Transfer Language, Register transfer, Bus and memory transfer, Arithmetic, Logical and Shift Micro Operation, Arithmetic Logic Shift Unit

***Basic Computer Organization and Design:***

Instruction Codes, Computer Registers, Computer Instructions, Timing and Control, Instruction Cycle & Register Reference Instructions, Memory Reference Instructions, Input-Output and Interrupt. Design of Basic Computer

**Unit – II**

10 hours

***Basic Processing Unit:***

Some Fundamental Concepts: Register Transfers, Performing an Arithmetic or Logic Operation, Fetching a Word from Memory, Storing a word in Memory, Execution of Complete Instruction, Branch Instructions, Multiple Bus Organization

***Micro-Programmed Control:***

Control Memory, Address Sequencing: Conditional branching, Mapping of Instruction, Subroutine; Micro Program Example: Computer configuration, Microinstruction format, Symbolic Microinstruction, The fetch routine, Symbolic Microprogram, Binary Microinstruction; Design of Control Unit: Microprogram Sequencer

**Unit – III**

10 hours

***Memory Organization:***

Memory Hierarchy, Associative Memory: Hardware Organisation, Match Logic, Read Operation, Write Operation; Cache Memory: Associative Mapping, Direct Mapping, Set Associative Mapping, Write into Cache Memory, Cache Initialization; Virtual Memory: Address Space and Memory Space, Address mapping Using Pages, Associative Memory Page Table, Page Replacement

**Unit – IV**

10 hours

***Pipeline and Vector Processing:***

Parallel Processing, Pipelining: General Considerations; Arithmetic Pipeline, Instruction Pipeline: Four-segment Instruction Pipeline Example, Data Dependency, Handling of Branch Instructions; Vector Processing; Array Processors

**Multiprocessors:**

Characteristics of Multiprocessors, Interconnection structures, Interprocessor arbitration, Interprocessor communication and synchronization, Cache coherence

**Text Books:**

1. Computer System Architecture- M. M . Mano (PHI)
2. Computer Organization- Carl Hamacher, Zvonko Vranesic, Safwat Zaky 5th Edition, McGraw-Hill Education India
3. Computer Organization & Architecture-William Stallings (PHI)

**Reference Book:**

1. Computer Architecture and Organization- Rajiv Chopra (S. Chand)

|  |                         |                    |

| <b>Pre-requisites:</b> Digital Logic, Computer Organization  |                         |                    |
| <b>Objectives:</b>   |                         |                    |
| <ul style="list-style-type: none"> <li>✓ To understand the role of operating system as a resource manager</li> <li>✓ To learn the techniques adopted by an operating system for efficient management of various computing resources</li> </ul> |                         |                    |

**Unit – I**

10 hours

Review of Operating System concepts such as Batch processing, Multiprogramming, Time sharing, Real-time systems, and Multi-tasking, layered structure of OS, OS services.

File systems, File access methods: sequential, indexed and direct, File Allocation Methods, Directory structures, File protection

**Unit – II**

10 hours

Need for CPU Scheduling, Process State Transition diagram, preemptive and non-preemptive scheduling, FCFS, Preemptive and non-preemptive SJF, Priority, Round Robin, multi-level feedback queues, Evaluation of scheduling techniques.

Memory management: Contiguous and non-contiguous allocation, MFT, MVT, memory fragmentation, swapping, paging and segmentation.

**Unit – III**

10 hours

Concept of Virtual Memory, demand paging, page faults, page replacement techniques: FIFO, Optimal, LRU, Belady's Anomaly, frame allocation techniques, Thrashing.

Disk scheduling : FCFS, SSTF, Scan, Look, C-Scan, C-Look

**Unit – IV**

10 hours

Concept of Deadlock, conditions for deadlock, resource allocation graph, deadlock prevention, deadlock avoidance, safety sequence, Banker’s algorithm, deadlock detection and recovery, Inter-process Communication (IPC), Concurrent processes, Process synchronization, Critical Section, Classic IPC Problems, Mutual Exclusion, Semaphore.

**Text Books:**

1. Operating system concepts, Galvin and Silberschatz, Wiley India.
2. Principles of Operating Systems, Naresh Chauhan, Oxford University Press.

**Reference Books:**

1. Modern Operating systems, A.S. Tanenbaum, Pearson Education Inc.
2. Operating Systems: A Spiral Approach”, Elmasri, Carrick, Levine, McGraw-Hill

|   |                                       |                    |

| <b>Objectives:</b>  |                                       |                    |
| <ul style="list-style-type: none"> <li>✓ To understand business applications from a system point of view</li> <li>✓ To understand the key functional areas of business applications</li> <li>✓ To appreciate the use of computers in business for efficiency</li> </ul> |                                       |                    |

**Unit – I**

10 hours

Importance of information systems, Framework for business End users, Global information society, Need for information technology in Business, Globalization, Business process re-engineering, Information, System concepts, feedback & controls, Info. System components resources & activities, Types of Information System Operations support systems, management support system.

**Unit – II**

10 hours

System approach to problem solving, defining problems & opportunities, developing & evaluating alternative solutions, System development cycle: feasibility study, system analysis, system design, prototyping, computer aided systems engineering.

**Unit – III**

10 hours

Business information systems: marketing information system, manufacturing information system, accounting information system, human resource information system, financial

information system, Transaction Processing system, information system for management, decision support system (DSS & EIS).

## Unit – IV

10 hours

Information system for strategic advantage, reengineering business process, Managing information resources & technologies: operational management, resource management, technology management, distributed management, organizational planning & information technology, implementing business changes, security & ethical issues in information systems.

### Text Books:

1. Management Information System (4<sup>th</sup> Edition), James A O'Brien (Galgotia)
2. Management information system, Sadagopan (PHI)

The Lab sessions will include design of solution to problems, coding, testing, execution of programs, and interpretation of results. Followings are some of the programming activities:

|   |   |                    |
|---|---|--------------------|
| <b>Sub. Code: COMP C106P</b>                                      | <b>Lab - 1 (DS &amp; C Programming)</b> |                    |
| <b>Semester: 1</b>  | <b>Credit: 4</b>                        | <b>Core Course</b> |
| <b>Pre-requisites:</b> Logical thinking and writing of algorithms |   |                    |
| <b>Objectives:</b>  |   |                    |

✓ To write efficient programs in C and implement various data structures

1. Write programs using various control structures, arrays of different dimensions, Structures, Functions, Recursive functions, Pointer variables, and file concepts in C language.
2. Write programs for dynamic memory allocation using malloc ( ) and calloc ( ) functions.
3. Write programs to insert and delete items in Stack and Queue data structures.
4. Write programs to implement linked lists that allow creation, traversal, insertion, and deletion operations.
5. Write programs for creation and traversal of Binary trees.
6. Write programs to represent graphs in the matrix form and implement graph traversals.
7. Write programs to implement different Searching and Sorting techniques.

## Second Semester

|  |   |                    |
|--|---|--------------------|
| <b>Sub. Code: COMP C201</b>  | <b>Data Base Management Systems</b>           |                    |
| <b>Semester: 1</b>   | <b>Credit: 4</b>                              | <b>Core Course</b> |
| <b>Pre-requisites:</b> Basic understanding of file systems and data structures   |   |                    |
| <b>Sub. Code: COMP C202</b>  | <b>Computer Based Optimization Techniques</b> |                    |
| <b>Objectives:</b>   |   |                    |
| <ul style="list-style-type: none"> <li>✓ To learn the design of database systems</li> <li>✓ To understand the intricacies of query processing and database transaction management</li> <li>✓ To learn the design principle and management of distributed database systems</li> </ul> |   |                    |

### **Unit – I** 10 hours

Review of DBMS concepts and architecture, Data modelling using Entity - Relationship (ER) diagrams, Relational model, Relational Algebra and Relational calculus.

Database Design: data dependencies, the normalization process, conversion to 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, Boyce-Codd, 4<sup>th</sup> and 5<sup>th</sup> normal forms.

### **Unit – II** 10 hours

Query Processing: Evaluation of Relational Algebra Expressions, Query Equivalence, Join strategies, Query Execution.

Query optimization, Heuristics in Query Optimization, Semantic Query Optimization, Converting Query Tree to Query Evaluation Plan, multiquery optimization, concept of No SQL

### **Unit – III** 10 hours

Database Transactions, ACID Properties, Serializability, Concurrency control: lock-based and timestamp based protocols

Database recovery techniques: log-based recovery and shadow paging, Database Security. Deadlock detection and recovery.

### **Unit – IV** 10 hours

Distributed database systems: a comparative view of distributed DB and centralized DB, distributed DBMS, levels of distribution transparency, reference architecture, data fragmentation (hierarchical, vertical and mixed), Distributed database design: top-down and bottom up approaches, Management of distributed transactions, concurrency control, distributed deadlocks.

### **Text Books:**

1. Database Systems Concepts, A. Silberschatz, H. F. Korth, S. Sudarshan (McGraw Hill)
2. Distributed Systems: Concepts and Design - George Coulouris, Jean Dollimore et al  
Pearson Education, Inc. New Delhi.

### **Reference Books:**

1. Fundamentals of Database Systems, Elmsari and Navathe (Addision Wesley)
2. Database Management Systems – Rajiv Chopra, S Chand pub.

|--|------------------|--------------------|
| <b>Semester: 2</b>   | <b>Credit: 4</b> | <b>Core Course</b> |
| <b>Pre-requisites:</b> No pre-requisite required   |                  |                    |
| <b>Objectives:</b>   |                  |                    |
| <ul style="list-style-type: none"> <li>✓ To study Application of Operation Research</li> <li>✓ To understand linear programming problem</li> <li>✓ To understand how to solve real life problems of operation research such as Transportation Problem, Assignment Problem etc</li> <li>✓ To understand techniques for solving sequencing problem and Project Management</li> </ul> |                  |                    |

**Unit – I**

10 hours

Linear programming problem: Formulation of LPP, Graphical Method, Simplex Method, Artificial variable technique: Two Phase method and Big-M method; Problem of Degeneracy, Special cases: Alternative solutions, Unbounded solutions, Non-existing feasible solutions, Revised simplex method (Emphasis should be only on algorithm)

**Unit – II**

10 hours

Duality in LPP: Concept of Duality in LPP, General rules for converting any Primal into its Dual, Duality and Simplex Method, Dual simplex method; Integer Programming: Gomory's Cutting Plane Method, Branch and Bound Method

**Unit – III**

10 hours

Transportation problems: Finding an initial basic feasible solution by Northwest Corner rule, Least Cost rule, Vogel's approximation method, Moving towards Optimality, MODI method, Minimization, Degeneracy, Unbalanced transportation problem; Assignment problems: Hungarian method for solution of Assignment problems, Unbalanced Assignment problems, variations in Assignment problems; Travelling salesman problem;

**Unit – IV**

10 hours

Job Sequencing; Project management: Basic terms, Common errors, Rules for Network Construction, Critical Path Method(CPM), Project Evaluation and Review Technique (PERT), Non-linear programming problem (Formulation and Graphical Method), Quadratic programming: Kuhn-Tucker Conditions, Wolfe's Method, Beale's Method

**Text Books:**

1. Operation Research-S. D. Sharma (Kedar Nath Ramnath Publication)
2. Operations Research – Prem Kumar Gupta and D. S. Hira (S. Chand)
3. Operations Research - Kanti Swarup (Sultan Chand & Sons).

**Reference Book:**

1. Operation Research – S. R. Yadav & A. K. Malik (Oxford University Press)

|--|--|--------------------|
| <b>Sub. Code: COMP C203</b>  | <b>Design and Analysis of Algorithms</b> |                    |
| <b>Semester: 2</b>   | <b>Credit: 4</b>                         | <b>Core Course</b> |
| <b>Pre-requisites:</b> Data Structure  |  |                    |
| <b>Objective:</b>  |  |                    |
| ✓ To learn analysis of algorithm and different algorithm design techniques, graph algorithms and their applications, understanding algorithms with exponential time complexity |  |                    |

**Unit – I**

10 hours

Introduction: Characteristics of algorithm. Analysis of algorithm: Asymptotic analysis of complexity bounds – best, average and worst-case behavior; Performance measurements of Algorithm, Time and space trade-offs, Algorithm design technique such as divide and conquer, Analysis of recursive algorithms through recurrence relations: Substitution method, Recursion tree method and Masters’ theorem.

**Unit – II**

10 hours

Fundamental Algorithmic Strategies: Brute-Force: Linear search, selection sort, Greedy: Huffman coding, Fractional knapsack problem, Activity selection Problem, Dynamic Programming: matrix chain multiplication, Longest common subsequence, Travelling Salesman Problem, Branch- and-Bound and Backtracking methodologies for the design of algorithms; Illustrations of these techniques for Problem-Solving , Knapsack, Travelling Salesman Problem.

**Unit – III**

10 hours

Graph and Tree Algorithms: Traversal algorithms: Depth First Search (DFS) and Breadth First Search (BFS); Shortest path algorithms, Minimum Spanning Tree, Topological sorting, Network Flow Algorithm.

**Unit – IV**

10 hours

Tractable and Intractable Problems: Computability of Algorithms, Computability classes – P, NP, NP-complete and NP-hard. Cook’s theorem, Standard NP-complete problems (Clique Decision, Node cover Decision and Chromatic Number Decision problem) and Reduction techniques.

**Text Books:**

1. Introduction to Algorithms, 4TH Edition, Thomas H Cormen, Charles E Lieserson, Ronald L Rivest and Clifford Stein, MIT Press/McGraw-Hill.
2. Fundamentals of Algorithms – E. Horowitz et al.

| <b>Pre-requisites:</b> Basic understanding of internal components of computer systems and its operations.  |                         |                    |
| <b>Objectives:</b>   |                         |                    |
| <ul style="list-style-type: none"> <li>✓ To build an understanding of the fundamental concepts of computer networking.</li> <li>✓ To familiarize the student with the basic taxonomy and terminology of the computer networking area.</li> <li>✓ To preparing the student for entry Advanced courses in computer networking.</li> <li>✓ Allow the student to gain expertise in some specific areas of networking such as the design and maintenance of individual networks.</li> </ul> |                         |                    |

### Unit – I

10 hours

Introduction to Computer Networks, Uses of Computer Networks, Network Hardware, Network Software, Network Topology, OSI Reference Models, TCP/IP Protocol Suite, Addresses in TCP/IP, Digital and Analog Transmission, Multiplexing Techniques, Switching Techniques, Wireless Transmission, Cellular Radio, Satellite Network, Data Link Layer Design issues, Error Detection and Correction, Elementary Data Link Protocols.

### Unit – II

10 hours

Channel Allocation Problem, Multiple Access Protocols, IEEE Standard 802 for LANS and MANS, Internetworking Devices: Repeater, Bridges, Router, Gateway, High-speed LANS, Satellite Networks, Network Layer Design Issues, Routing Algorithms, Congestion Control Algorithms, TCP/IP Protocol Suit, ATM networks.

### Unit – III

10 hours

Transport Layer Services, Elements of Transport Protocols, Performance Issues, Cryptography and Network security.

### Unit – IV

10 hours

DNS, Electronic mail, SMTP, FTP, TELNET, SNMP, WWW and HTTP.

**Text Books:**

1. Computer Networks -A S Tenenbaum (PHI)
2. Data Communications and Networking - B. A. Forouzan (PHI)

**Reference Books:**

1. Computer Networks – Bhushan Trivedi, Oxford University Press.
2. Computer Networking: A Top-Down Approach Featuring the Internet, 3/e - James F. Kurose & Keith W. Ross (Pearson Education India)
3. Computer Networks: A Systems Approach - Bruce S. Davie and Larry L. Peterson (Elsevier Inc.)

| <b>Pre-requisites:</b> Basic idea of Software development  |                             |                    |
| <b>Objectives:</b>   |                             |                    |
| <ul style="list-style-type: none"> <li>✓ To have an insight into large-scale software development process</li> <li>✓ To have an appreciation for the use of an engineering approach to software development</li> <li>✓ To learn approaches for software cost estimation, building reliable and quality software systems</li> </ul> |                             |                    |

**Unit – I**

10 hours

Evolution of Software Engineering, Software Processes, software Life cycle Models, Software Project Management, Software Requirements, Requirements Engineering, Feasibility study, Requirement analysis and specification, System Models.

**Unit – II**

10 hours

Software Design, Architectural Design – Cohesion and coupling, Abstraction, Data flow Oriented Design, Object-Oriented Design, User Interface Design.  
Rapid Software Development, Software Reuse, Component Based Software Engineering.  
Implementation and Testing: Verification and Validation, Software Testing techniques

**Unit – III**

10 hours

Software Cost Estimation, COCOMO Model, Software Reliability, Software Quality Management, Configuration Management, Software Maintenance.

**Unit – IV**

10 hours

New trends and technologies in software development, Capability Maturity Model, Capability Maturity Model Integration, Agile software development, Extreme Programming, Service-oriented Software Engineering

**Text Books:**

1. Fundamentals of Software Engineering - Rajib Mall (PHI)
2. Software Engineering -Ian Sommerville (Pearson Education)
3. Software Engineering: A Practitioner's Approach - Roger Pressman (McGraw Hill)

|   |                                       |                    |
|---|---------------------------------------|--------------------|
| <b>Sub. Code: COMP C206</b>                       | <b>Lab - 2 (Data Base Management)</b> |                    |
| <b>Semester: 2</b>                                | <b>Credit: 4</b>                      | <b>Core Course</b> |
| <b>Pre-requisites:</b> Database and file concepts |                                       |                    |
| <b>Objectives:</b>                                |                                       |                    |
| ✓ To develop database applications                |                                       |                    |

Students are expected to develop the skill of building applications that require storage of large data. The emphasis will be on efficient design of databases to facilitate database access and query processing.

Students will learn how to create database tables using MySQL and write DML statements to perform database operations like Insertion, Deletion, Updation, etc.

Students will also write varieties of query expressions including nested and join queries.

Applications involving Student database, Employee database, Customer database, Bank transactions, etc. will be developed.

## Third Semester

|   |   |                    |
|---|---|--------------------|
| <b>Sub. Code: COMP C301</b>   | <b>Object Oriented Programming and Design with Java</b> |                    |
| <b>Semester: 3</b>  | <b>Credit: 4</b>  | <b>Core Course</b> |
| <b>Pre-requisites:</b> Basic Programming and OOPs Concepts  |   |                    |
| <b>Objective:</b>   |   |                    |
| ✓ To understand the use of OOPs concept and programming in Java, Understanding different feature and concept of Java. |   |                    |

### Unit – I

10 hours

Introduction to Java Programming, Concept of JVM, Data Types and Operations, Structured Programming, Selection Statements, Loops, Methods, Method Abstraction and Stepwise Refinement, Arrays, Classes and Objects, Constructors, Implementing & Designing Classes, Use of Keywords: *static*, *final*, *this*, Class Abstraction and Encapsulation, Strings and Text I/O

### Unit – II

10 hours

Inheritance, Use of *super* keyword, Overriding vs Overloading, Abstract Classes and Interfaces, Packages, Polymorphism, Object-Oriented Design and Patterns.

### Unit – III

10 hours

GUI Programming: GUI Basics, Graphics, Event-Driven Programming, Creating User Interfaces, Applets and Multimedia, Exception Handling, Binary I/O, Files & Streams, Recursion, Dynamic Binding, Generic Programming.

### Unit – IV

10 hours

Multithreading, JDBC, MVC, JavaBeans, Containers, Swing Models, JTable and JTree, Advanced features of Java.

### Text Books:

1. Complete Reference – Hebert Schildt
2. Introduction to Java Programming: Comprehensive Version- Y. Daniel Liang, Pearson Education Inc., New Delhi.
3. Programming with Java: A Prime - E. Balagurusamy, McGraw-Hill Education (India).
4. Java How to Program -Harvey M. Deitel & Paul J. Deitel, PHI, New Delhi.

|   |                   |                    |
|---|-------------------|--------------------|
| <b>Sub. Code: COMP C302</b>   | <b>E-Commerce</b> |                    |
| <b>Semester: 3</b>  | <b>Credit: 4</b>  | <b>Core Course</b> |
| <b>Pre-requisites: Understanding of commercial systems</b>  |                   |                    |
| <b>Objectives:</b>  |                   |                    |
| <ul style="list-style-type: none"> <li>✓ To understand different electronic business models</li> <li>✓ To learn how different electronic payment systems work</li> <li>✓ To have an insight into the issues and challenges in the implementation of e-commerce</li> </ul> |                   |                    |

**Unit – I**

10 hours

Introduction to e-commerce: Business models and business processes, identifying e-commerce opportunities, international nature of e-commerce, technology infrastructure-internet & WWW; Business strategies for e-commerce: Revenue models in transaction, revenue strategic issues, creating an effective web presence, website usability; Marketing on the web: Web marketing strategies, communicating with different market segments, customer behavior and relationship intensity, advertising on the web, technology enabled CRM.

**Unit – II**

10 hours

Business to business strategies: Purchasing, logistics and supply activities, electronic data interchange (EDI), electronic data interchange on the internet, supply chain management using internet technologies, electronic market place & portals (Home shopping, E-marketing, Tele marketing), auctions, online auctions, virtual communicative & web portals.

**Unit – III**

10 hours

Payment systems in e-commerce: card system, E-cheque, E-cash, E-coin, use of digital signature Technologies for e-commerce: web server hardware & software, e-commerce software Intelligent agents in E-commerce, PUSH & PULL technology

**Unit – IV**

10 hours

Security issues in e-commerce, online security issues, security for client computers and server computers, communication channel security  
Intellectual property in online business, online crime, terrorism & warfare, ethical issues.  
Planning for e-commerce: planning e-commerce initiatives, strategies for delivering e-commerce web sites, managing e-commerce Implementations.

**Text Books:**

1. E-Business and E-Commerce Management- Dave Chaffey (Pearson Education Inc)
2. Electronic Commerce - Gary P. Schneider (CENGAGE Learning India)
3. E-Commerce- K.K. Bajaj, D. Nag (McGraw Hill Education)
4. Electronic Commerce-Technology and Application - Bhaskar Bharat, (McGraw Hill)
5. E-Commerce fundamentals and Applications – Chan (Wiley India)

|  |   |                    |
|--|---|--------------------|
| <b>Sub. Code: COMP C303</b>  | <b>Data Warehousing and Data Mining</b> |                    |
| <b>Semester: 3</b>   | <b>Credit: 4</b>                        | <b>Core Course</b> |
| <b>Pre-requisites:</b> Acquire knowledge about methodologies used for analysis of data and various techniques which enhance the data modelling   |   |                    |
| <b>Objectives:</b>   |   |                    |
| <ul style="list-style-type: none"> <li>✓ To identify the scope and essentiality of Data Mining and Warehousing.</li> <li>✓ Be familiar with mathematical foundations of data mining.</li> <li>✓ To analyze data, choose relevant models and algorithms for respective applications.</li> <li>✓ To study spatial and web data mining.</li> <li>✓ Identify appropriate data mining algorithms to solve real world problems.</li> </ul> |   |                    |

**Unit – I**

10 hours

Motivation for Data Mining, Introduction to Data Mining, DBMS vs. Data Mining, Issues and Challenges in Data Mining, Application Areas, Knowledge Discovery steps, Concept of Data Warehousing, 3-Tier Architecture, Multidimensional Data Model, OLAP, ROLAP, and MOLAP Operations,

**Unit – II**

10 hours

Concept Hierarchies, Interestingness Measures, Data Generalization and Summarization-based Characterization, Mining Association Rules, Apriori Algorithm for finding Frequent Item-Sets, Iceberg Queries, Mining Multilevel Association Rules, Mining Distance-Based Association Rules, Correlation Analysis.

**Unit – III**

10 hours

Classification and Prediction: Decision Tree based Classification, Bayesian Classification, Classification by Back Propagation, K-Nearest Neighbor Classifier  
Cluster Analysis: Categorization of Clustering Methods, Partitioning Methods, K-Means and K-Medoids, Hierarchical Methods, Density-Based Clustering (DBSCAN)

**Unit – IV**

10 hours

Web Mining, Classification of Web Documents, Web Content Mining, Web Structure Mining, Web Usage Mining, Text Mining, Text Clustering, Mining Spatial Databases, Mining Multimedia Databases, Temporal Data Mining, Temporal Association Rules, Sequence Mining.

**Text Books:**

1. Data mining; Concepts and techniques by J. Han and M. Kamber (Morgan Kaufmann)
2. Data Mining by A.K. Pujari (University press)

## Reference Books:

1. Data Mining by Vikram Pudi and P. Radha Krishna (Oxford University Press)
2. Introduction to Data Mining - Tan, Steinbach & Kumar (Pearson)
3. Data Mining: Practical Machine Learning Tools and Techniques - Ian H. Witten & Eibe Frank (Elsevier India)
4. Data Mining Techniques: For Marketing, Sales, and Customer Relationship Management - Gordon S. Linoff & Michael J. A. Berry (Wiley)
5. Data Mining and Analysis Fundamental Concepts and Algorithms - Zaki & Meira (Cambridge University Press)

|  |                                |                    |

| <b>Pre-requisite:</b> Skill of writing algorithms  |                                |                    |
| <b>Objectives:</b>   |                                |                    |
| <ul style="list-style-type: none"> <li>✓ To understand the basic principles of Artificial Intelligence (AI) and learn techniques to solve problems that require human intelligence</li> <li>✓ To have exposure to different application areas of AI</li> </ul> |                                |                    |

### Unit – I

10 hours

Concepts in AI, defining an AI Problem as state space search, AI problem characteristics, AI techniques, Production systems, control strategies, reasoning - forward & backward chaining. Intelligent Agents: Definitions of a rational agent, reflex, model-based, goal-based, and utility-based agents, the environment in which a particular agent operates.

### Unit – II

10 hours

Use of Search Techniques in AI problem solving, Breadth first search, depth first search, iterative deepening.

Heuristic Search Techniques: generate-and-test, Hill climbing, Best first search, A\* algorithm problem reduction, AO\* algorithm, Minmax & Game trees, Alpha – Beta pruning,

### Unit – III

10 hours

Knowledge Representation in AI, issues in knowledge representation, Knowledge Representation using predicate logic, semantic nets, frames, scripts & conceptual Dependency

Expert systems: Architecture, knowledge base, inference engine, Knowledge acquisition, Expert system development, applications of expert systems.

Natural language processing: Syntactic processing, Semantic analysis

**Unit – IV**

10 hours

Planning in AI, Partial order planning

Uncertainty in AI problem solving: prior probability, conditional probability, Bayes' rule, Dempster-Shafer theory.

Pattern recognition and classification process, learning classification patterns,

Concept of Artificial Neural networks, Distributed AI, Contract-Net Protocol

**Text Books:**

1. Artificial Intelligence - E. A. Rich and Kelvin Knight (TMH)
2. Artificial Intelligence: A Modern Approach, S. Russell and P. Norvig, Pearson

**Reference Books:**

1. Introduction to AI and Expert Systems- D.W. Patterson (PHI)
2. Principles of AI and Expert systems development, D. W. Rolston (McGraw Hill)
3. Artificial Intelligence - P. H. Winston (Addison Wesley)

**Unit – I**

10 hours

**Artificial Neural Network**

Fundamental concepts, basic models of Neural Networks, Supervised Learning Network: Perceptron network, Adaline, Madaline, Back-propagation, Radial basis function network, Functional Link Networks

**Unit – II**

10 hours

Unsupervised Learning Network: Kohonen Self-organization Feature Maps, Learning Vector Quantization, Counterpropagation Networks, Adaptive Resonance Theory Network

**Unit – III**

10 hours

**Fuzzy Logic System**

Introduction to Fuzzy Logic, Fuzzy sets, Fuzzy relations, Features of Membership functions, Fuzzification, Lambda cuts for fuzzy sets, Lambda cuts for fuzzy relations,

Defuzzification methods, Fuzzy propositions, Formation of Rules, Decomposition of rules, Aggregation of fuzzy rules, fuzzy inference system

## Unit – IV

10 hours

### Genetic Algorithm

Genetic Algorithm and search space, Genetic Algorithm vs. Traditional Algorithms, Basic Terminologies in Genetic Algorithm, Simple GA, General Genetic Algorithm, Operators in Genetic Algorithm, stopping condition for Genetic Algorithm flow, Constraints in Genetic Algorithm, Problem solving using Genetic Algorithm, The Schema Theorem

### Particle Swarm Optimization

Introduction to Particle Swarm Optimization(PSO), Operation of Particle Swarm Optimization, Basic flow of Particle Swarm Optimization, Comparison between PSO and GA.

### Text Books:

1. Principles of Soft Computing - S. N. Sivanadam, S. N. Deepa (Wiley India Pvt. Ltd)
2. Soft Computing and Intelligent Systems Design: Theory, Tools and Applications - Fakhreddine O. Karray, Clarence De Silva (Pearson Education, New Delhi)
3. Genetic Algorithms: Search, Optimization and Machine Learning - D.E. Goldberg (Addison Wesley)
4. Learning and Soft Computing – Vojislav Kecman (Pearson Education)
5. Neural Networks, Fuzzy Logic, & Genetic Algorithms Synthesis & Applications - S. Rajasekaran, and G. A. Vijayalakshmi Pai (PHI)

## Unit – I

10 hours

Introduction to IoT, Basic requirements for building an IoT system, IoT reference framework, IoT network level – performance criteria.

IoT devices: Sensors, Types of sensors and their functions: temperature, pressure, air pollution, proximity, infrared, moisture & humidity, flow, level, noise, and speed sensors. Characteristics of sensors. Use of RFID

Actuators, Types of actuators and their functions: electrical, mechanical, and hydraulic actuators, controlling IoT devices.

**Unit – II**

10 hours

IoT requirements for networking protocols, device addressing, credential management, wireless spectrum, determinism, security and privacy, application interoperability, semantic interoperability. IoT Protocol Stack: layered view.

Link layer: IEEE 802.15.4 technology, LoRaWAN end-to-end architecture, Time-Sensitive Networking

Internet Layer: Routing Protocol for Low-Power and Lossy Networks

**Unit – III**

10 hours

Application Protocols Layer: Data Serialization Formats, Communication Paradigms: Request/Response Versus Publish/Subscribe, Blocking Versus Non-blocking, QoS: Resource Utilization, Data Timeliness, Data Availability, Data Delivery

IoT Application Protocols: CoAP, XMPP, MQTT, AMQP, SIP, IEEE 1888, and DDS RTPS.

Application Services Layer: ETSI M2M network architecture, oneM2M standards.

IoT Services Platform: Functions and Requirements, IoT Platform Manager, Discovery, Communication Manager, Data Management, Management of IoT Devices, Configuration and Fault Management, Performance Management and measures.

**Unit – IV**

10 hours

IoT security and Privacy: challenges, requirements, IoT Three-Domain Architecture, Attacks and Countermeasures for each domain.

Applications of IoT in areas like Smart home, Agriculture, Healthcare, Industry, Transportation, Retail, Oil and Gas, Energy etc. IoT Service Model: Anything as a Service, IoT Connected Ecosystems Models.

**Text Books:**

1. Internet of Things from Hype To Reality: The Road to Digitization (2nd ed), Ammar Rayes and Samer Salam, Springer, 2019.

**Unit – I**

10 hours

Output Primitives:

Overview of computer graphics, Video Display Devices: Refresh Cathode-Ray Tubes, Raster scan displays, Random scan displays, Raster scan systems, Random scan systems, Output Primitives: Points and lines, Line drawing algorithms: DDA algorithm, Bresenham's line algorithm, Circle generation algorithm: Mid-point Circle Drawing Algorithm, Filled-Area Primitives: Scan line polygon fill algorithm

**Unit – II**

10 hours

2D Transformation &amp; Viewing:

Basic transformations: Translation, rotation, scaling; Matrix representations & homogeneous coordinates, Composite transformations, Other transformations

The Viewing pipeline, Window to viewport co-ordinate transformation, clipping operations, Point clipping, Line Clipping(Cohen-Sutherland), Polygons Clipping(Sutherland-Hodgeman)

**Unit – III**

10 hours

3D Transformation &amp; Viewing:

3D transformations: Translation, rotation, scaling & other transformations, Viewing pipeline, Viewing coordinates, Projections, View volume and General Projection Transformations, Clipping

**Unit – IV**

10 hours

Visible Surface Detection Methods: Classification of Visible-Surface Detection Algorithms, Back-Face Detection, Depth Buffer Algorithm, Scan-Line Method, Depth-Sorting Method, Area Subdivision method

Illumination and Surface-Rendering: Light sources, Basic illumination models: Ambient light, Diffuse reflection, Specular reflection and the Phong model, Combined Diffuse and Specular reflections with multiple light sources, Polygon rendering methods

**Text Books:**

1. Computer Graphics – Donald Hearn and M. Pauline Baker (Pearson)
2. Computer Graphics - Zhigang Xiang, Roy A. Plastock (McGraw-Hill Education, India)

**Reference Books:**

1. Computer Graphics – Er. Rajiv Chopra, (S. Chand Publication)
2. Principles of Interactive Computer Graphics – W.M. Newmen, R F Sproull (McGraw Hill)

| <ul style="list-style-type: none"> <li>✓ To provide an overview of Wireless Communication networks and its applications in communication engineering.</li> <li>✓ To explain the various terminologies, principles, devices, schemes, concepts, algorithms and different methodologies used in Wireless Communication Networks.</li> <li>✓ To enable students to compare and contrast multiple division techniques, mobile communication systems, and existing wireless networks.</li> </ul> |                         |                            |

**Unit – I**

10 hours

Introduction to mobile computing, mobile computing architecture, mobile devices, mobile system networks, data dissemination, mobility management, Security Cellular Network and frequency reuse, Mobile Smartphones, Smart Mobiles and Systems, Handheld Pocket Computers, Handheld Devices, Smart Systems, Limitations of Mobile Devices, Automotive Systems.

**Unit – II**

10 hours

Modulation, Multiplexing, Controlling the Medium access, Spread spectrum, Frequency Hopping Spread Spectrum, Coding Methods, Code division Multiple Access, IMT-2000 3G Wireless Communication Standards, WCDMA 3G Communication Standards, CDMA2000 3G Communication Standards, I-mode, OFDM, High Speed Packet Access (HSPA) 3G Network, Long Term Evolution, WiMax Rel 1.0 IEEE 802.16e, Broadband Wireless Access, 4G Networks, Mobile Satellite Communication Networks.

**Unit – III**

10 hours

Data Organization, Database Transactional Models- ACID rules, Query Processing, Data Recovery Process, Database Hoarding Techniques, Data Caching, Client-Server Computing for Mobile Computing and Adaptation, Adaptation software for Mobile Computing, Power-aware Mobile computing, Context-aware Mobile Computing, Mobile Agent, Application Framework, Application Server, Gateways, Service Discovery, Device Management, Mobile File Systems, Security.

**Unit – IV**

10 hours

Mobile Ad-hoc & sensor networks, MANET and its applications, Routing algorithms: DSR protocol, AODV routing protocol, and TORA. Wireless sensor networks, applications, WLAN architecture, introductory concepts of mobile application languages: XML, J2ME, features of Mobile OS: Palm OS, Symbian OS.

**Text Books:**

1. Mobile Computing, Raj Kamal (Oxford University press)
2. Mobile Computing Technology, Applications & Service Creation, A K Talukder & R R Yavagal (TMH)

**Reference Books:**

| <b>Semester: 4</b>  | <b>Credit: 4</b>                  | <b>Core Course</b> |
| <b>Pre-requisites:</b> Object Oriented concepts                   |                                   |                    |
| <b>Objectives:</b>  |                                   |                    |
| ✓ To write efficient java programs using object oriented concepts |                                   |                    |

Thomas Stober (Second Edition, Springer)

The objective here is to understand the concepts behind object oriented programming. Students will

1. Understand the concept of Java virtual machine and the execution environment of Java
2. Write programs using the concept of Class and Objects.
3. Learn the use of member functions, constructors etc.
4. Implement various forms of inheritance
5. Learn the use of different packages
6. Experiment with different built-in functions available in Java
7. Learn the use of files in Java

## Fourth Semester

|   |                             |                             |
|---|-----------------------------|-----------------------------|
| <b>Sub. Code: COMP E411</b>   | <b>Information Security</b> |                             |
| <b>Semester: 4</b>  | <b>Credit: 4</b>            | <b>Elective Course - II</b> |
| <b>Pre-requisites:</b> Computer internals working process, computer networking principles and communication techniques.   |                             |                             |
| <b>Objectives:</b>  |                             |                             |
| <ul style="list-style-type: none"> <li>✓ To understand the common threats faced today</li> <li>✓ To study the foundational theory behind information security.</li> <li>✓ To learn the basic principles and techniques when designing a secure system.</li> </ul> |                             |                             |

### Unit – I

10 hours

Attacks, services and mechanism, security attacks, security services, conventional encryption model, Steganography, cipher principles, data encryption standards, strength of DES, differential and linear crypto analysis, Block cipher design principles, Block cipher model of operation.

### Unit – II

10 hours

DES, double DES, Triple DES, international data encryption algorithm, blowfish, RC5, CAST-128, RC2, characterization of advanced symmetric block ciphers, placement of encryption function, traffic confidentiality, key distribution, random number generation, public key cryptography: principles of public key cryptosystem, RSA algorithm, Key management, diffie-Hellman key exchange, Elliptic curve cryptography.

### Unit – III

10 hours

Message authentication and Hash function: authentication requirements, functions message authentication codes, hash functions, security of hash functions and MACs, MD5 message digest algorithm, secured hash algorithm, digital signatures, authentication protocols, digital signature standard.

### Unit – IV

10 hours

Firewall design principles, IP security architecture, authentication header, encapsulating security payload, security associations, key management.

### Text Books:

1. Cryptography and network security Principles and practice - William Stallings (Person education)
2. Applied Cryptography–Schneier (John wiley)

**Reference Books:**

1. Cryptography and Network Security, Atul Kahate (TMH)
2. Information Security: The Complete Reference - Bragg Roberta, Mark Rhodes-Ousley & Keith Strassberg (Mc Graw Hill Education)
3. Information Systems Security: Security Management, Metrics, Frameworks and Best Practices - Nina Godbole (Wiley)

|  |                           |                             |

| <b>Pre-requisites:</b>   |                           |                             |
| <b>Objectives:</b>   |                           |                             |
| <ul style="list-style-type: none"> <li>✓ Learn Injecting data into Hadoop</li> <li>✓ Learn to build and maintain reliable, scalable, distributed systems with Hadoop</li> <li>✓ Able to apply Hadoop ecosystem components</li> </ul> |                           |                             |

**Unit – I**

10 hours

Introduction to Big data, distributed file system, Big Data and its importance, Four Vs, Drivers for Big data, Big data analytics, Big data applications. Algorithms using map reduce, Matrix-Vector Multiplication by Map Reduce.

**Unit – II**

10 hours

Introduction to HADOOP Big Data, Apache Hadoop & Hadoop Ecosystem, Moving Data in and out of Hadoop, Understanding inputs and outputs of MapReduce, Data Serialization.

**Unit – III**

10 hours

Hadoop Architecture, Hadoop Storage: HDFS, Common Hadoop Shell commands, Anatomy of File Write and Read, NameNode, Secondary NameNode, and DataNode, Hadoop MapReduce Paradigm, Map and Reduce tasks, Job, Task trackers - Cluster Setup – SSH & Hadoop Configuration – HDFS Administering – Monitoring & Maintenance.

**Unit – IV**

10 hours

HADOOP ecosystem and yarn Hadoop ecosystem components - Schedulers - Fair and Capacity, Hadoop 2.0 New Features NameNode High Availability, HDFS Federation, MRv2, YARN, Running MRv1 in YARN.

**Text Books:**

3. Tom White, “HADOOP: The definitive Guide”, O Reilly 2012. 4. MapReduce Design Patterns (Building Effective Algorithms & Analytics for Hadoop) by Donald Miner & Adam Shook

|   |                        |                             |
|---|------------------------|-----------------------------|
| <b>Sub. Code: COMP E413</b>   | <b>Compiler Design</b> |                             |
| <b>Semester: 4</b>  | <b>Credit: 4</b>       | <b>Elective Course - II</b> |
| <b>Pre-requisites:</b> Theory of Computation  |                        |                             |
| <b>Objective:</b> To learn the concepts of compiler, different stages of a compiler and techniques used for developing a simple language compiler, the practical fundamentals of how a compiler is implemented. |                        |                             |

**Unit – I**

10 hours

Introduction to compilers, Compilers and Interpreters, Phases of Compiler: Lexical analysis, syntax analysis, Intermediate code generation, code optimization, object code generation, symbol table management, error handling, multi-pass compilers, cross compiler. Lexical analysis: role of lexical analyzer, design of lexical analyzer, finite state machine, transition diagram, regular expression, conversion of NDFSM to DFSM, regular expression to FSM.

**Unit – II**

10 hours

Syntax Analysis: syntactic specification of programming language, context free grammar, derivation of parser tree, basic parsing techniques, types of parser, shift-reduce parser, operator grammar, operator precedence grammar, operator precedence parsing, LL(I) grammar, predictive parser.

**Unit – III**

10 hours

Intermediate code generation: syntax directed translation schemes, implementation of SDTS, intermediate codes: polish notation. Abstract syntax tree, three address codes, quadruples, triples, indirect triples translation of assignment statement, Boolean expression, declarative statement. Symbol table and error handling: data structure of symbol table, types of errors, lexical and semantic errors.

**Unit – IV**

10 hours

Code optimization: Sources of code optimization, loop optimization, identification of loops, DAG representation, Object code generation: problem of code generation, simple code generation, register allocation and object code generation, peep hole optimization.

**Text Books:**

1. Principles of Compiler Design - Aho & Ullman (Narosa)
2. Compiler Design: Theory and practice - Burrett (Mc Graw Hill)

| <b>Pre-requisites:</b>   |  |                             |
| <b>Objectives:</b>   |  |                             |
| <ul style="list-style-type: none"> <li>✓ To understand the growing importance of data science</li> <li>✓ To implement various data science applications in Python</li> </ul> |  |                             |

**Unit – I**

10 hours

Introduction to Data Science, its growing relevance, statistical inferencing, supervised and unsupervised learning, application areas such as recommender systems, sentiment analysis.

Python: basic syntax, interactive shell, editing, saving, and running a script. The concept of data types, variables, assignments, immutable variables, numerical types, arithmetic operators and expressions, comments in the program, understanding error messages, Conditions, Boolean logic, logical operators, ranges, Control statements: if-else, loops (for, while). Break, Continue, Pass.

Strings and text files, String manipulations: subscript operator, indexing, slicing a string.

**Unit – II**

10 hours

Lists, tuples, and dictionaries, basic list operators, replacing, inserting, removing an element, searching and sorting lists, dictionary literals, adding and removing keys, accessing and replacing values, traversing dictionaries.

Design with functions: hiding redundancy, complexity, arguments and return values, formal vs actual arguments, named arguments. Program structure and design. Recursive functions.

**Unit – III**

10 hours

Modules, Importing module, Math module, and Random modules. Packages, Composition, manipulating files and directories, Input-Output: Opening and closing file. Reading and writing files text files, creating and reading a formatted file (csv or tab-separated).

Classes and OOP: classes, objects, attributes and methods, defining classes, design with classes, data modelling, persistent storage of objects. OOP Advanced: inheritance, polymorphism, operator overloading, abstract classes, exception handling in python.

**Unit – IV**

10 hours

Multithreading: Thread, starting a thread, threading module, synchronizing threads, Multithreaded Priority Queue, Database Connections, Executing queries, Transactions, Handling error.

Graphical user interfaces, event-driven programming paradigm, creating simple GUI, buttons, labels, entry fields, dialogs, widget attributes - sizes, fonts, colours layouts, frames.

**Text Books:**

1. Introduction to Data Science, Laura Igual & Santi Sagui, Springer
2. The Fundamentals of Python, Kenneth A. Lambert, 2011, Cengage Learning.
3. Core Python Programming, 2nd Edition, by Dr. R. Nageswara Rao. Dreamtech Press.

**Reference Book:**

**Unit – I**

10 hours

**Introduction:**

What Is Machine Learning? Examples of Machine Learning Applications; Learning Problems, designing a learning system, Issues with machine learning. Concept Learning, Version Spaces and Candidate Eliminations, Inductive bias

**Unit – II**

10 hours

**Supervised and Unsupervised learning:**

Decision Tree Representation, Appropriate problems for Decision tree learning, Algorithm, Hypothesis space search in Decision tree learning, inductive bias in Decision tree learning, Issues in Decision tree learning

K- Nearest Neighbour Learning, Locally Weighted Regression, Radial Bases, Functions

**Unit – III**

10 hours

**Artificial Neural networks:**

Neural Network Representation, Appropriate problems for Neural Network Learning, Perceptrons, Multilayer Networks and Back Propagation Algorithms, Remarks on Back Propagation Algorithms, Case Study: face Recognition

**Unit – IV**

10 hours

**Bayesian Learning:**

Bayes Theorem, Bayes Theorem and Concept Learning, Maximum Likelihood and Least squared Error Hypothesis, MAXimum likelihood hypothesis for Predicting probabilities, Minimum Description Length Principle, Bayes Optimal Classifier, Gibbs Algorithm, Naïve Bayes Classifier, Bayesian Belief Network, EM Algorithm, Case Study: Learning to classify text

**Unit – I**

10 hours

Blockchain: Introduction, Advantage over conventional distributed database, Blockchain Network, Distributed Consensus, Merkle Patricia Tree, Gas Limit, Transactions and Fee, Anonymity, Reward, Chain Policy, Life of Blockchain application, Soft & Hard Fork, Private and Public Blockchain.

**Unit – II**

10 hours

The consensus problem - Asynchronous Byzantine Agreement - AAP protocol and its analysis, Nakamoto Consensus on permission-less, nameless, peer-to-peer network - Abstract Models for

BLOCKCHAIN - GARAY model - RLA Model - Proof of Work (PoW) as random oracle - formal treatment of consistency, liveness and fairness - Proof of Stake (PoS) based Chains - Hybrid models (PoW + PoS).

Cryptographic basics for cryptocurrency: a short overview of Hashing, signature schemes, encryption schemes and elliptic curve cryptography.

### **Unit – III**

10 hours

Cryptocurrency: History, Distributed Ledger, Bitcoin protocols - Mining strategy and rewards, Ethereum -Construction, DAO, Smart Contract, GHOST, Vulnerability, Attacks, Sidechain, Name coin. Bitcoin- Wallet - Blocks - Merkle Tree - hardness of mining - transaction verifiability - anonymity - forks - double spending - mathematical analysis of properties of Bitcoin.

Ethereum - Ethereum Virtual Machine (EVM) - Wallets for Ethereum - Solidity - Smart Contracts - some attacks on smart contracts.

### **Unit – IV**

10 hours

Cryptocurrency Regulation: Stakeholders, Roots of Bit coin, Legal Aspects-Crypto currency Exchange, Black Market and Global Economy. Zero Knowledge proofs and protocols in Blockchain - Succinct non interactive argument for Knowledge (SNARK) - pairing on Elliptic curves – Zcash.

Applications of Blockchain: Supply Chain management, Medical Record Management System, IoT

**Unit – I**

10 hours

Introduction to digital image processing, Digital image representation, steps in image processing, elements of Digital Image Processing System. Elements of Visual perception, Sampling and Quantization, Basic relationships between Pixels.

**Unit – II**

10 hours

Image Transforms, Imaging geometry, Photographic film, Fourier transform, properties of two separable Fourier transform, Four Fourier transform, other separable Fourier transforms.

**Unit – III**

10 hours

Image Enhancement, background of image enhancement, enhancement by point processing, spatial filtering, enhancement in the frequency domain, colour image processing.

**Unit – IV**

10 hours

Image Restoration: Degradation model, diagonalization of circulant block, circulant matrices, algebraic approach to restoration, inverse filtering, least mean square restoration, interactive restoration, restoration in the spatial domain, geometric transformations.

**Text Books:**

1. Digital Image Processing - R.C. Gonzalez and R.E. Wood (Addition Wesley)
2. Fundamentals of Digital Image Processing - Anil K. Jain (PHI)

| <b>Semester: 4</b>   | <b>Credit: 4</b>       | <b>Elective Course - III</b> |
| <b>Pre-requisites:</b> Knowledge of operating system and computing models  |                        |                              |
| <b>Objectives:</b>   |                        |                              |
| <ul style="list-style-type: none"> <li>✓ To have exposure to various cloud models and their implications</li> <li>✓ To understand the design issues &amp; techniques in the management of cloud resources</li> </ul> |                        |                              |

**Unit – I**

10 hours

Evolution of cloud computing, utility computing, service based computing, characteristics of cloud computing, Cloud service models: IaaS, PaaS, SaaS, Cloud deployment models: public, private, hybrid, community, examples of cloud services such as Amazon EC2, Azure VMs, Google App engine, Salesforce.

**Unit – II**

10 hours

Virtualization concepts and technologies, scalability and elasticity, deployment, replication and monitoring, identity and access management, Virtual machines provisioning and migration services: VM provisioning process, VM migration services, migration techniques.

**Unit – III**

10 hours

Cloud Resource provisioning, SLA management in cloud computing, billing, load balancing, admission control, types of SLA, life cycle of SLA, SLA management, automated policy-based management.

**Unit – IV**

10 hours

Cloud disaster management, privacy and security issues in cloud, digital identity and data security, cloud storage, data centre, Cloud based services and applications in education, healthcare and business.

**Text Books:**

1. Cloud Computing: Principles and Paradigms – Rajkumar Buyya, James Broberg and Andrzej Goscinski, Wiley publications.
2. Cloud Computing: A Hands-On Approach – A Bahga and V Madisetti, University Press
3. Cloud Computing – U S Pandey and K Choudhary, S Chan

|---|-----------------------------------|------------------------------|
| <b>Sub. Code: COMP E419</b>   | <b>Service Oriented Computing</b> |                              |
| <b>Semester: 4</b>  | <b>Credit: 4</b>                  | <b>Elective Course - III</b> |
| <b>Pre-requisites:</b> Knowledge of Internet technology   |                                   |                              |
| <b>Objectives:</b>  |                                   |                              |
| <ul style="list-style-type: none"> <li>✓ To understand the present trend of modeling anything as a service and the related architectural designs</li> <li>✓ To learn the approaches for building service oriented systems and their interoperation</li> </ul> |                                   |                              |

**Unit – I**

10 hours

Service oriented computing paradigm: computing with services, its suitability for the evolving open environment, a comparative view of objects, components and services, Service-oriented architecture: service provider, service consumer, service registry, SOA collaboration, service orchestration and service choreography.

**Unit – II**

10 hours

Coordination frameworks for web services: WSCL, Web services choreography interface, WS-coordination: coordination service, activation service, registration service, Service management, Notion of grid services

**Unit – III**

10 hours

Building SOC applications: elements of SOC design, steps of the SOC approach, service identification, domain decomposition, subsystem analysis, service allocation, component specification, technology realization mapping. Applications of SOC.

**Unit – IV**

10 hours

Web services architecture, Web services standards, web services technology options: Transport (HTTP, Java Message service), Service Communication protocol (SOAP), Service Description (XML, WSDL), accessing web services, Service registry (UDDI), security issues.

**Text Books:**

1. Service-Oriented Computing - M.P. Singh & M. N. Huhns (John Wiley & Sons Ltd)
2. Patterns: Service-Oriented Architecture & Web Services, IBM Redbook.

| <b>Semester: 4</b>   | <b>Credit: 4</b>                  | <b>Elective Course - III</b> |
| <b>Pre-requisites:</b> Programming in Java   |                                   |                              |
| <b>Objective:</b>  |                                   |                              |
| ✓ To learn technologies and programming constructs required for developing web portals |                                   |                              |

**Unit – I**

10 hours

Introduction to Network Programming: Introduction to Web Applications and its programming. Description about Web application, Client, Server (Apache Tomcat/ WebLogic/GlassFish), Client side programming (HTML5/CSS3/JavaScript/JQuery), Introduction to XML/JSON.

**Unit – II**

10 hours

Introduction to JDBC, JDBC Drivers (4 types), Architecture of JDBC, Components of JDBC (Classes and Interfaces). Programming with JDBC, creating a database (MS-ACCESS/ORACLE/MySQL (for Type-3 and Type-4 connection), connecting to the database created, Loading the Driver, Establishing the Connection, Creating Statements (Statement/Prepared Statement/Callable Statement), Executing a SQL Query, Simple Statement, Atomic Statement, Pre-Compiled Statement, SQL Statements for stored Procedures, JDBC Program to retrieve data from database.

Introduction to Result Set, Result Set with Statement Interface, Result Set with Prepared Statement Interface, Bidirectional Result Set, Result Set Scroll ability type, Result Set Updatability type, Updating data to the database using Result Set, Result Set Metadata, Executing Stored Procedures Using Callable Statement.

**Unit – III**

10 hours

Introduction to Servlets: concept of Servlet, Advantage of Servlet Over Applets and CGI, Architecture of Web Application, Web Servers and its Containers, Role of servlet in Web application development, understanding servlet-API, Understanding HTTP protocol and communication between HTML-servlet.

Types of Servlet, Difference between HttpServlet and GenericServlet, Life cycle of Servlets and different life cycle methods, Difference between doGet() and doPost(), Servlet Generating Html output, Collecting Client submitted data in a Servlet.

Servlet communications: Servlet to DBMS communication using type-4 connection, Servlet to DBMS communication using JDBC connection pooling, Servlet communication with other servlets (Servlet Chaining), Servlet communication with JSP or HTML page (sendRedirect(), Difference between sendRedirect() and RequestDispatcher forward(), Understanding ServletConfig.

Servlet Filters and wrappers, Servlet Listeners, Session Tracking, Cookies, Http Session, HTML hidden form field element, URL rewriting, Annotation based servlet programs, Web Security with servlets, Servlet code for file uploading and downloading, Servlet code for mailing.

## **Unit – IV**

10 hours

Java Server Pages: Introduction to JSP, Scope of JSP, Anatomy of a JSP program, Execution of a JSP program, Significance of JSP Engine, Built-in objects of JSP, Significance of JSP Elements, Scripting Elements, Scriptlets, Declaration, Expression, Directives and Action Elements, Page Directive, Include Directive, Taglib Directive, Forward action element, Include, Param, useBean with introduction to beans, setProperty, getProperty

Introduction to JNDI, Introduction to web services (SOAP/SOA), Rest API, introduction to JSTL, Springs, Hibernate.

### **Text Book:**

1. Advanced Java Programming, Uttam K. Roy, Oxford University Press

### **Reference Books:**

1. Black book, Kogent Learning Solution Inc.
2. Java 2: The Complete Reference by Herbert Schildt, Fifth Edition

|---|--|--------------------|
| <b>Sub. Code: COMP PRO</b>  | <b>Major Project Work / Internship</b> |                    |
| <b>Semester: 4</b>  | <b>Credit: 4</b>                       | <b>Core Course</b> |
| <b>Pre-requisites: Knowledge of Programming</b>   |  |                    |
| <b>Objectives:</b>  |  |                    |
| <ul style="list-style-type: none"> <li>✓ To develop the ability to analyze the operation of existing systems that require automation</li> <li>✓ To develop the skill to prepare System Requirement Specification documents</li> <li>✓ To design software systems with the use of design tools</li> <li>✓ To write efficient code for implementation</li> <li>✓ To test the system to comply with the requirements</li> <li>✓ To operationalize the end-product</li> </ul> |  |                    |

1. Students are expected to undertake a software development project (preferably a real-life project) and implement the same by following a software engineering approach.
2. Students will analyze a system, understand, design, write code, test, and implement the software system as an end-product.
3. Projects can be undertaken in small groups where the students will learn how to work in a software development group.
4. During the project period students will have a feel of working in an IT industry
5. Student has to work under the guidance of a supervisor.
6. S/he has to submit a project report and give a presentation.

**Bridge Course**  
**(For B.Sc./ B.Com./ B.A. Candidates)**

**Objective:**

- ✓ The purpose of this bridge course is to prepare the non-computer science students with the basic knowledge of computers, its functioning, programming concepts, etc. before getting into the actual MCA curriculum.
- ✓

**UNIT-1**

Basic organization of a computer and its working principle, input-output and secondary storage devices, memory representation of data.

**UNIT-2**

Problem solving with a computer, flowchart, algorithms, basic algorithmic notions, procedure- and object oriented programming  
Program development: Problem Analysis, coding, editing, Compiling, executing and testing of programs

**UNIT- 3**

Types of software, Role of operating system, Business data processing, Concept of DBMS.  
Basics of computer networks, network topologies, types of networks, use of different networking components, Internet, WWW, web browsers, search engines, cyber security issues.

**UNIT-4**

Office Automation tools:

MS WORD: creating a document, editing and formatting, setting header and footer, mail merge

MS EXCELL: creating a spread sheet, use of basic formulae and functions

MS POWER POINT: preparing power point slides, adding animation and different effects.

**BOOKS:**

1. Computer Fundamentals, P K Sinha, P Sinha, BPB publications.
2. Information Technology, D. V. Singh and S. Kumar, N. Tyagi *et al*, University of Delhi
3. Essential Computer and IT Fundamentals for Engineering and Science Students, N. B. Venketeswarlu, S. Chand publications.
